```

The invention relates to an insulin regulator construct comprising glucose response element (GIRE) of a liver pyruvate kinase (LPK) ge promoter and an insulin-sensitive element (ISE) of an insulin-like factor binding protein-1 (IGFBP-1) basal promoter. The construct is

growth s used

to treat or prevent diabetic

complications,

```

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        production, to modulate hyperglycaemia (without severe hypoglycaemia), to increase fat catabolism and to retard protein catabolism. The construct provides stimulation of insulin expression by glucose (but not other carbohydrates) and glucocorticoids and inhibition by glucagon so that a combination of these effects can maintain nearly euglycaemic conditions in diabetics during short-term fasting, large carbohydrate loads or when fed ad libitium and prevent pathological ketogenesis and ketoacidosis, thus inhibiting the long-term complications of diabetes. The properties of the construct are essentially specific for hepatocytes and well-differentiated hepatoma lines and insulin expression in these cells may have effects additional to those provided by secreted insulin, or inhibition of cellular protein degradation, and inhibition, or estimulation of other intracellular hormone receptors. The compound also be used to identify an agent which modulates in a controlled can also be used to identify an agent which modulates in a coll. The methods utilise a set of at least two probes (on a solid support in kit form), where each of the probes comprises a sequence that specifically hybridises to a gene listed in the specification, a computer comprising at database containing information identifying the expression level in a tissue or cell sample exposed to a hepatotoxin of a set of genes comprising at least two genes listed in the specification, conducted in the specification. The method is useful for elucidating global changes in gene expression and for identifying toxicity markers in consicity markers in drug screening and toxicity assays. The genes and consicity markers in drug screening and toxicity assays. The genes and consider that has been exposed to a compound or agent. Hepatotoxicity is sample that has been exposed to a compound or agent. Hepatotoxicity is

Also included are methods of predicting at least one toxic effect of a compound or progression of a toxic effect, preferably the progression of a toxic effect, preferably the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to a method for predicting a toxic effect CC of a compound. The method comprises preparing a gene expression profile CC of a tissue or cell sample exposed to the compound, and comparing the CC gene expression profile to a database comprising SEQ ID 14925, where CC The method is useful for predicting at least one toxic effect. CT of a compound, predicting hepatotoxicity or the progression of a toxic effect of a compound, identifying an agent that modulates the onset or CC progression of a toxic response, predicting the cellular pathways that a CC compound modulates in a cell, and identifying an agent that modulates at CC least one activity of a protein. The method and compositions of the CC differential expression, are useful in identifying toxicity markers in CC liver tissues or cells for drug screening and toxicity assays. Note: The sequence data for this patent did not form part of the printed consecution, but was obtained in electronic format directly from WIPO are ferre when in the format of the printed consecutions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention describes a method for determining whether a compound induces a toxic effect on a tissue or cell. The method comprises preparing a gene expression profile of a tissue or cell sample exposed to the compound, and comparing the gene expression profile to a database comprising data or information on the Tox mean and non-Tox mean value. The method is useful for predicting or identifying at least one toxic effect, particularly hepatotoxicity, of a test or unknown compound. The genes listed in the specification are useful as diagnostic or toxicity markers for the prediction or identification of the physiological state of tissue or cell sample that has been exposed to a compound, or to identify or predict the toxic effects of a compound or an agent. These may also be used as markers for monitoring toxicity progression or for drug screening. The present sequence represents a primary rat hepatocyte toxicity modelling related gene sequence from the present invention.

                                                                                                                                                                                                                  information given in the specification. The methods are useful for predicting at least one toxic effect of a compound, predicting the progression of a toxic effect of a compound, predicting the renal toxicity of a compound, or identifying toxicity markers in tissues or cells exposed to known renal toxic. The genes are useful as toxicity markers in drug screening and toxicity assays, in monitoring disease or physiological states, or disease progression. This polymucleotide represents a rat DNA sequence relating to the toxic effect database described in the specification. NOTE: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the World Intellectual Property

                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to a novel method of predicting at least one toxic effect of a compound. The method compurises a gene expression profile of a tissue or cell sample exposed to the compound, and comparing the gene expression profile to a database comprising at least part of the data or

ID ADP72
The invention relates to a method of predicting (the progression of) a CC toxic effect of a compound by preparing a gene expression profile of a CC kidney tissue or cell sample exposed to the compound and comparing the cC gene expression profile to a database, or detecting the level of gene (s) expression in a tissue or cell sample exposed to the compound, where CC differential gene expression compared to a control indicates a toxic ceffect (toxicity progression). The method is useful for predicting (the CC progression of) at least one toxic effect of a compound. The genes are CC useful as toxicity markers in drug screening and toxicity assays. The CC useful as toxicity markers in drug screening and toxicity assays. The CC differential induce various specific kidney pathologies, such as nephritis, compound in the second or test agent will induce various specific kidney pathologies, such as nephritis, compound necrosis, glomerular and tubular injury, or focal segmental CC glomerulosclerosis. The methods are useful for determining the similarity of a toxic response; glomerular and tubular injury, or focal segmental CC predicting or elucidating the potential cellular pathways influenced, CC induced or modelling the compound or test agent. The kit is useful for predicting the progression of renal disease states, for identifying genes that show promise as new drug targets and for screening known and newly designed drugs. This sequence corresponds to a gene marker used in the CC method of the invention. (Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic CC format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Mendrick

                                                                                                                                          무
                                                                                                                                                                        Ş
                                                                                                                                                                                                                                                                                       밁
                                                                                                                                                                                                                                                                                                                The invention relates to a novel method for diagnosing and detecting the CC progression of liver cancer, hepatocellular carcinoma or metastatic liver CA hepatocellular carcinoma in a patient, involving detecting the level of hepatocellular carcinoma in a patient, involving detecting the level of expression of two or more genes represented in ARN93503-ARN97455 in a CC tissue sample. The method of the invention has hepatotropic, and CC typostatic activity. The method is useful for diagnosting and detecting the progression of liver cancer, hepatocellular carcinoma and metastatic CC liver carcinoma in a patient. The method is useful for identifying CC expression profiles which serve as useful diagnostic markers as well as markers that can be used to monitor disease states, disease progression, CC drug toxicity, drug efficacy and drug metabolism. Note: The sequence data for this patent did not form part of the printed specification, but was CC obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               liver cancer or for screening agents in a patient. The agent is useful for the manufacture of a medicament for treating and/or preventing liver cancer. The present sequence represents a human IGFBP-1 polypeptide encoding genomic DNA (GenBank Accession No. M74587)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to detecting the presence or diagnosing the risk of a liver cancer in a patient. The method involves detecting in a biological sample obtained from the patient aberrant expression of a gene encoding an insulin-like growth factor binding protein (IGBBP). The method is useful for detecting the presence or diagnosing the risk of a method is useful for detecting the presence or diagnosing the risk of a method is useful for detecting the presence or diagnosing the risk of a method is useful for detecting the presence or diagnosing the risk of a method is useful for detecting the presence or diagnosing the risk of a method is useful for detecting the presence or diagnosing the risk of a method is useful for detecting the presence or diagnosing the risk of a method in the patients.

CC AAH57161 to AAH57576 represent cell and tissue specific polynucleotide CC sequences (I). (I) can have cytostatic, immunomodulatory and CC neuroprotective activities, and can be used in gene therapy. (I) and CC proteins (II) encoded by then are used in high throughput screening assays to select DNA molecules, RNA molecules, peptide nucleic acids, mimetics, peptides, proteins, agonists, antagonists, antibodies or their fragments, immunoglobulins, inhibitors, drug compounds and pharmaceutical agents. Expression of (I) in a sample indicates the differentiation of CC embryonic stem cells into a tissue selected from brain, heart, kidney, CC liver, lung, skeletal muscle or pancreatic tissues. (I) and (II) are used to produce an expression profile that defines a metabolic or developmental process, treatment, condition, disease or disorder. The CC developmental process, treatment, condition, disease or monitoring of treatments and for investigating a predisposition to a disorder where the CC gene profile can be used for diagnosis, prognosis or monitoring of treatments and for investigating a predisposition to a disorder where the CC gene picture.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match 19.9

```

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Rat insulin regulator construct DNA #3.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     intracellular hormone receptor; insulin regulator construct; anabolic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  (THUL/) THULE P M.
```

The invention relates to an insulin regulator construct comprising a glucose response element (GIRE) of a liver pyruvate kinase (LPK) gene

Claim 9; Page 14; 37pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CC promoter and an insulin-sensitive element (ISE) of an insulin-like growth CC factor binding protein-l (IGFBP-1) basal promoter. The construct is used CC to treat or prevent diabetic complications, to regulate insulin CC production, to modulate hyperglycaemia (without severe hypoglycaemia), to CC increase fat catabolism and to retard protein catabolism. The construct CC provides stimulation of insulin expression by glucase (but not other CC carbohydrates) and glucocorticoids and inhibition by glucagon so that a CC combination of these effects can maintain nearly euglycaemic conditions in diabetics during short-term fasting, large carbohydrate loads or when CC fed ad libitum and prevent pathological ketogenesis and ketoacidosis, CC thus inhibiting the long-term complications of diabetes. The properties of the construct are essentially specific for hepatocytes and well-CC differentiated hepatoma lines and insulin expression in these cells may converted additional to those provided by secreted insulin, e.g. CC inhibition of cellular protein degradation, and inhibition, or CC stimulation of other intracellular hormone receptors. This sequence CC represents a rat insulin regulator construct of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match 100.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                to treat or prevent diabetic complications, to regulate insulin production, to modulate hyperglycaemia (without severe hypoglycaemia), to increase fat catabolism and to retard protein catabolism. The construct provides stimulation of insulin expression by glucose (but not other carbohydrates) and glucocorticoids and inhibition by glucagon so that a combination of these effects can maintain nearly euglycaemic conditions in diabetics during short-term fasting, large carbohydrate loads or when fed ad libitum and prevent pathological ketogenesis and ketoacidosis, thus inhibiting the long-term complications of diabetes. The properties of the construct are essentially specific for hepatocytes and well-differentiated hepatoma lines and insulin expression in these cells may have effects additional to those provided by secreted insulin, e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to an insulin regulator construct comprising a glucose response element (GIRE) of a liver pyruvate kinase (LPK) gene promoter and an insulin-sensitive element (ISE) of an insulin-like growth factor binding protein-1 (IGFBP-1) basal promoter. The construct is used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 321
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    inhibition of cellular protein degradation, and inhibition, or stimulation of other intracellular hormone receptors.                                                                                                                                                                                                                                                                                                                           The invention relates to an insulin regulator construct comprising a glucose response element (GRRE) of a liver pyruvate kinase (LPK) gene CC promoter and an insulin-sensitive element (ISE) of an insulin-like growth CC factor binding protein-1 (IGRBP-1) basal promoter. The construct is used to treat or prevent diabetic complications, to regulate insulin CC production, to modulate hyperglycaemia (without severe hypoglycaemia), to increase fat catabolism and to retard protein catabolism. The construct CC provides stimulation of insulin expression by glucose (but not other CC carbohydrates) and glucocorticoids and inhibition by glucagon so that a CC combination of these effects can maintain nearly euglycaemic conditions in diabetics during short-term fasting, large carbohydrate loads or when CC fed ad libitum and prevent pathological ketogenesis and ketoacidosis, thus inhibiting the long-term complications of diabetes. The properties of the construct are essentially specific for hepatocytes and well-construct are essentially specific for hepatocytes and well-construct are essentially specific for hepatocytes and well-construct are essentially specific for hepatocytes cells may cat inhibition of cellular protein degradation, and inhibition, or construct of the invention con

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               S
The invention relates to an insulin regulator construct comprising a glucose response element (GIRS) of a liver pyruvate kinase (LPK) gene promoter and an insulin-sensitive element (ISB) of an insulin-like growth factor binding protein-1 (IGFBP-1) basal promoter. The construct is used to treat or prevent diabetic complications, to regulate insulin production, to modulate hyperglycaemia (without severe hypoglycaemia), to increase fat catabolism and to retard protein catabolism. The construct provides stimulation of insulin expression by glucose (but not other carbohydrates) and glucocorticoids and inhibition by glucagon so that a combination of these effects can maintain nearly euglycaemic conditions
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Glucose response element; GIRE; liver pyruvate kinase; LPK; ds; IGFBP-1 insulin-sensitive element; ISE; basal promoter; hyperglycaemia; insulir insulin-like growth factor binding protein-1; hypoglycaemia; glucose; fat catabolism; protein catabolism; carbohydrate; glucocorticoid; rat; glucagon; euglycaemia; diabetes; fasting; ketogenesis; ketoacidosis; hepatocyte; hepatoma; cellular protein degradation; antidiabetic; intracellular hormone receptor; insulin regulator construct; anabolic.
                                                                                                                                                                                                              New insulin regulator cassette, useful e.g. for treating diabetes, provides specific, glucose-inducible transgenic expression of insuliver cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Synthetic.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     in diabetics during short-term fasting, large carbohydrate loads or when fed ad libitum and prevent pathological ketogenesis and ketoacidosis, thus inhibiting the long-term complications of diabetes. The properties of the construct are essentially specific for hepatocytes and well-differentiated hepatoma lines and insulin expression in these cells may have effects additional to those provided by secreted insulin, e.g. inhibition of cellular protein degradation, and inhibition, or stimulation of other intracellular hormone receptors. This sequence represents a rat insulin regulator construct of the invention
                                                                  New insulin regulator cassette, useful e.g. for treating diabetes

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CC The invention relates to an insulin regulator construct comprising a CC glucose response element (GIRE) of a liver pyruvate kinase (LPK) gene CC promoter and an insulin-sensitive element (ISE) of an insulin-like growth CC factor binding protein-([GFBP-1]) basal promoter. The construct is used to treat or prevent diabetic complications, to regulate insulin CC production, to modulate hyperglycaemia (without severe hypoglycaemia), to increase fat catabolism and to retard protein catabolism. The construct CC provides stimulation of insulin expression by glucose (but not other CC carbohydrates) and glucocorticoids and inhibition by glucagon so that a CC combination of these effects can maintain nearly euglycaemic conditions in diabetics during short-term fasting, large carbohydrate loads or when CC fed ad libitum and prevent pathological ketogenesis and ketoacidosis, thus inhibiting the long-term complications of diabetes. The properties of the construct are essentially specific for hepatocytes and well-carbohydrate defects additional to those provided by secreted insulin, e.g. chave effects additional to those provided by secreted insulin, e.g. chimbition of cellular protein degradation, and inhibition, or stimulation of other intracellular hormone receptors. This sequence crepresents a rat insulin-sensitive element of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Matches 219;

The construct provides stimulation of insulin expression by glucose (but not other catbohydrates) and glucocorticoids and inhibition by glucagon so that a combination of these effects can maintain nearly euglycaemic conditions in diabetics during short-term fasting, large carbohydrate loads or when fed ad libitum and prevent pathological ketogenesis and ketoacidosis, thus inhibiting the long-term complications of diabetes. The properties of the construct are essentially specific for hepatocytes and well-differentiated hepatoma lines and insulin expression in these cells may have effects additional to those provided by secreted insulin, or inhibition of cellular protein degradation, and inhibition, or stimulation of other intracellular hormone receptors.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to an insulin regulator construct comprising a glucose response element (GIRE) of a liver pyruvate kinase (LPK) gene promoter and an insulin-sensitive element (ISE) of an insulin-like growth factor binding protein-1 (IGFBP-1) basal promoter. The construct is used to treat or prevent diabetic complications, to regulate insulin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New insulin regulator cassette, useful e.g. for treating diabetes, provides specific, glucose-inducible transgenic expression of insulin

CC cells. Also included are methods of predicting at least one toxic of a compound or progression of a toxic effect, preferably the CC hepatotoxicity of a compound, comprising detecting the level of CC hepatotoxicity of a compound, comprising detecting the level of CC expression in a tissue or cell sample exposed to the compound of two or CC more genes listed in the specification, where differential expression of CC expression also be used to identify an agent which modulates the toxic CC response and predict cellular pathways that a compound modulates in a CC cell. The methods utilise a set of at least two probes (on a solid CC support in kit form), where each of the probes comprises a sequence that specifically hybridises to a gene listed in the specification, a computer CC system comprising a database containing information identifying the expression level in a tissue or cell sample exposed to a hepatotoxin of a cet of genes comprising at least two genes listed in the specification, a computer CC supersision level in a tissue or cell of at least one gene CC isted in the specification. The method is useful for elucidating global CC changes in gene expression level in a tissue or cell of at least one gene CC isted in the specification. The method is useful for elucidating global CC toxicity markers in drug genes mand for identifying toxicity markers in CC tissues or cell exposed to a known toxin. The genes and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          11-MAY-2001;

                                           toxicity markers in drug screening and toxicity assays. The genes and gene expression information may be used as diagnostic markers for the prediction or identification of the physiological state of tissue or ce sample that has been exposed to a compound or agent. Hepatotoxicity is characterised by centrilobular necrosis and steatosis. The present sequence is an expressed sequence tag (EST) or cDNA derived from a gene which is differentially expressed in response to a hepatotoxic agent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to methods for predicting toxic effects of compounds or the progression of these toxic effects by determining the global changes in gene expression in tissues or cells exposed to the toxin and comparing these to gene expression in unexposed tissues or

                                                                                                                                                                                                                                                                       В
                                                                                                                                                                                                                                                                                                           S
                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention relates to a method for predicting a toxic effect CC of a compound. The method comprises preparing a gene expression profile CC of a tissue or cell sample exposed to the compound, and comparing the CC gene expression profile to a database comprising SEQ ID 1-4925, where CC The method is useful for predicting at least one toxic effect. CC The method is useful for predicting at least one toxic effect of a CC compound, predicting hepatotoxicity or the progression of a toxic effect of a compound, identifying an agent that modulates the onset or CC progression of a toxic response, predicting the cellular pathways that a CC compound modulates in a cell, and identifying an agent that modulates at least one activity of a protein. The method and compositions of the CC compound modulates in a cell, and identifying an agent that modulates at least one activity of a protein. The method and compositions of the CC present invention using a database of genes having liver toxin-induced CC differential expression, are useful in identifying toxicity markers in CC liver tissues or cells for drug screening and toxicity assays. ```

Determining if a compound induces a toxic effect on a tissue or cell, for identifying hepatotoxic compounds, comprises comparing a gene expression profile of a tissue or cell sample to a database of Tox mean and non-Tox mean values.

Claim 44; SEQ ID NO 3252; 874pp; English

genes listed in the specification are useful as diagnostic or toxicity markers for the prediction or identification of the physiological state of tissue or cell sample that has been exposed to a compound, or to identify or predict the toxic effects of a compound or an agent. These may also be used as markers for monitoring toxicity progression or for drug screening. The present sequence represents a primary rat hepatocyte The present invention describes a method for determining whether a compound induces a toxic effect on a tissue or cell. The method comprises preparing a gene expression profile of a tissue or cell sample exposed to the compound, and comparing the gene expression profile to a database comprising data or information on the Tox mean and non-Tox mean value. The method is useful for predicting or identifying at least one toxic effect, particularly hepatotoxicity, of a test or unknown compound. The toxicity modelling related gene sequence from the present invention rat hepatocyte

The invention relates to a novel method of predicting at least one toxic effect of a compound. The method comprises a gene expression profile of a tissue or cell sample exposed to the compound, and comparing the gene expression profile to a database comprising at least part of the data or information given in the specification. The methods are useful for predicting at least one toxic effect of a compound, predicting the progression of a toxic effect of a compound, predicting the renal coxicity of a compound, or identifying toxicity markers in tissues or cells exposed to known renal toxin. The genes are useful as toxicity markers in drug screening and toxicity assays, in monitoring disease or physiological states, or disease progression. This polynucleotide
                                                                                                                                                                                                             Predicting at least one toxic effect of a compound, useful for toxicity modeling, comprises preparing a gene expression profile of a tissue or cell sample exposed to the compound, and comparing the gene expression

                  The invention relates to a method of predicting (the progression of) a toxic effect of a compound by preparing a gene expression profile of a kidney tissue or cell sample exposed to the compound and comparing the gene expression profile to a database, or detecting the level of gene(s) expression in a tissue or cell sample exposed to the compound, where differential gene expression compared to a control indicates a toxic effect (toxicity progression). The method is useful for predicting (the progression of) at least one toxic effect of a compound. The genes are useful as toxicity markers in drug screening and toxicity assays. The methods are useful for predicting the likelihood that a compound or test agent will induce various specific kidney pathologies, such as nephritis, the progression of the progression of the progression of the state of the likelihood that a compound or test agent will induce various specific kidney pathologies, such as nephritis.
                                                                                                                                                                                                                                                                                                                                                                                       Claim 11; SEQ ID NO 1278; 266pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Predicting (the progression of) a toxic effect of a compound, monitoring the progression of renal disease states, comprises gene expression profile of a kidney tissue or cell sample exports.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ds; toxic effect; gene expression profile; kidney tissue; differential gene expression; toxicity progression; toxicity drug screening; toxicity assay; kidney pathology; nephritis; kidney necrosis; glomerular injury; tubular injury;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                represents a rat DNA sequence relating to the toxic effect database described in the specification. NOTE: The sequence data for this pat did not form part of the printed specification, but was obtained in electronic format directly from the World Intellectual Property

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        glomerulosclerosis. The methods are useful for determining the similarity of a toxic response to one or more individual compounds and for predicting or elucidating the potential cellular pathways influenced, induced or modulated by the compound or test agent. The kit is useful for predicting or modelling the toxic response of a test compound, for monitoring the progression of renal disease states, for identifying genes that show promise as new drug targets and for screening known and newly designed drugs. This sequence corresponds to a gene marker used in the method of the invention. (Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences).
The present invention describes a method of screening a test agent for hepatotoxicity. The method comprises: (a) providing a test cell population comprising a cell capable of expressing one or more nucleic acid sequences selected from the group consisting of RISKMARKER 1-8 and INJURYMARKER 1-10; (b) contacting the test cell population with a test agent; (c) measuring expression of one or more of the nucleic acid sequences in the test cell population; (d) comparing the expression of the nucleic acid sequence in the test cell population to the expression of
                                                                                                                                                                                                                                                                                             Disclosure;
                                                                                                                                                                                                                                                                                                                                                                                       Screening hepatotoxic agent comprises contacting test cell population expressing RISKMARKER or INJURYMARKER with agent, comparing expression with reference population and identifying difference in expression
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gould-Rothberg BE,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             21-NOV-2000; 2000WO-US032049.

tumour in a patient, and differentiating metastatic liver cancer from hepatocellular carcinoma in a patient, involving detecting the level of expression of two or more genes represented in ABN9303-ABN97455 in a tissue sample. The method of the invention has hepatocropic, and cytostatic activity. The method is useful for diagnosing and detecting the progression of liver cancer, hepatocellular carcinoma and metastatic liver carcinoma in a patient. The method is useful for identifying expression profiles which serve as useful diagnostic markers as well as markers that can be used to monitor disease states, disease progression, drug toxicity, drug efficacy and drug metabolism. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                   Diagnosing and detecting the progression of liver cancer, hepatocellular carcinoma or metastatic liver tumor in a patient, involves detecting the level of expression of two or more genes in a liver tissue sample.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    of the nucleic acid sequence in an reference cell population comprising at least one cell whose exposure status to a hepatotoxic agent in known; and (e) identifying a difference in expression levels of the RISKMARKER sequences, if present, in the test cell population and reference cell population. The method is useful for identifying a hepatotoxic agent. The present sequence is given in the exemplification

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to detecting the presence or diagnosing the risk of a liver cancer in a patient. The method involves detecting in a biological sample obtained from the patient aberrant expression of a gene encoding an insulin-like growth factor binding protein (IGFBP). The method is useful for detecting the presence or diagnosing the risk of a liver cancer or for screening agents in a patient. The agent is useful for the manufacture of a medicament for treating and/or preventing liver cancer. The present sequence represents a human IGFBP-1 polypeptide encoding genomic DNA (GenBank Accession No. M74587)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CC AAH57161 to AAH57576 represent cell and tissue specific polynucleotide CC sequences (I). (I) can have cytostatic, immunomodulatory and consequences (II) can have cytostatic, immunomodulatory and CC neuroprotective activities, and can be used in gene therapy. (I) and CC proteins (II) encoded by then are used in high throughput screening assays to select DNA molecules, RNA molecules, peptide nucleic acids, cominetics, peptides, proteins, agonists, antagonists, antibodies or their CC fragments, immunoglobulins, inhibitors, drug compounds and pharmaceutical agents. Expression of (I) in a sample indicates the differentiation of CC embryonic stem cells into a tissue selected from brain, heart, kidney, CC liver, lung, skeletal muscle or pancreatic tissues. (I) and (II) are used to produce an expression profile that defines a metabolic or developmental process, treatment, condition, disease or disorder. The CC developmental process, treatment, condition, disease or disorder where the gene profile can be used for diagnosis, prognosis or monitoring of treatments and for investigating a predisposition to a disorder where the gene profile can be used for diagnosis, prognosis or monitoring of treatments and for investigating a predisposition to a disorder where the gene profile can be used for disparse; immunopathology or neuropathology

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The invention relates to an insulin regulator construct comprising a glucose response element (GIRE) of a liver pyruvate kinase (LPK) gene

Claim 9; Page 14; 37pp; English.

New insulin regulator cassette, useful e.g. for treating diabetes, provides specific, glucose-inducible transgenic expression of insulin in liver cells.

WPI; 2002-674190/72.

The construct is used to treat or prevent diabetic complications, to regulate insulin production, to modulate hyperglycaemia (without severe hypoglycaemia), to increase fat catabblism and to retard protein catabblism. The construct provides stimulation of insulin expression by glucose (but not other carbohydrates) and glucocorticoids and inhibition by glucagon so that a combination of these effects can maintain nearly euglycaemic conditions in diabetics during short-term fasting, large carbohydrate loads or when fed ad libitum and prevent pathological ketogenesis and ketoacidosis, thus inhibiting the long-term complications of diabetes. The properties of the construct are essentially specific for hepatocytes and well-differentiated hepatoma lines and insulin expression in these cells may have effects additional to those provided by secreted insulin, e.g. thibition of cellular protein degradation, and inhibition, or stimulation of other intracellular hormone receptors. This sequence represents a rat insulin regulator construct of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       factor binding protein-1 (IGFBP-1) basal promoter. The construct is used to treat or prevent diabetic complications, to regulate insulin production, to modulate hyperglycaemia (without severe hypoglycaemia), to increase fat catabblism and to retard protein catabblism. The construct provides stimulation of insulin expression by glucose (but not other carbohydrates) and glucocorticoids and inhibition by glucagon so that a combination of these effects can maintain nearly euglycaemic conditions in diabetics during short-term fasting, large carbohydrate loads or when fed ad libitum and prevent pathological ketogenesis and ketoacidosis, thus inhibiting the long-term complications of diabetes. The properties of the construct are essentially specific for hepatocytes and well-differentiated hepatoma lines and insulin expression in these cells may have affects additional in these cells may
                                                                                                                                                                                                                                                                                                                                                                                                                                                       inhibition of cellular protein degradation, and inhibition, or stimulation of other intracellular hormone receptors. This sequence represents a rat insulin regulator construct of the invention

                                                                                                                                                                                                                     The invention relates to an insulin regulator construct comprising a glucose response element (GIRE) of a liver pyruvate kinase (LPK) gene CC gromoter and an insulin-sensitive element (ISE) of an insulin-like growth CC factor binding protein-1 (IGFBP-1) basal promoter. The construct is used to treat or prevent diabetic complications, to regulate insulin (CC increase fat catabolism and to retard protein catabolism. The construct provides stimulation of insulin expression by glucose (but not other CC carbohydrates) and glucocorticoids and inhibition by glucagenia (combination of these effects can maintain nearly euglycaemic conditions in diabetics during short-term fasting, large carbohydrate loads or when fee ad libitum and prevent pathological ketogenesis and ketoacidosis, thus inhibiting the long-term complications of diabetes. The properties of the construct are essentially specific for hepatocytes and well-construct are essentially specific for hepatocytes and well-construct additional to those provided by secreted insulin, e.g. tinhibition of cellular protein degradation, and inhibition, or represents a rat insulin regulator construct of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    밁
The invention relates to an insulin regulator construct comprising a glucose response element (GIRS) of a liver pyruvate kinase (LPK) gene promoter and an insulin-sensitive element (ISB) of an insulin-like growth factor binding protein-1 (IGFBP-1) basal promoter. The construct is used to treat or prevent diabetic complications, to regulate insulin production, to modulate hyperglycaemia (without severe hypoglycaemia), to increase fat catabolism and to retard protein catabolism. The construct provides stimulation of insulin expression by glucose (but not other carbohydrates) and glucocorticoids and inhibition by glucagon so that a combination of these effects can maintain nearly euglycaemic conditions
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Glucose response element; GIRE; liver pyruvate kinase; LPK; ds; IGFBP-1 insulin-sensitive element; ISE; basal promoter; hyperglycaemia; insulir insulin-like growth factor binding protein-1; hypoglycaemia; glucose; fat catabolism; protein catabolism; carbohydrate; glucocorticoid; rat; glucagon; euglycaemia; diabetes; fasting; ketogenesis; ketoacidosis; hepatocyte; hepatoma; cellular protein degradation; antidiabetic; introduction; protein degradation; protein degradation; protein degradation; protein degradation; protein d
                                                                                                                                                                                                                                                                                                                                                                                      New insulin regulator cassette, useful e.g. for treating diabetes, provides specific, glucose-inducible transgenic expression of insulin liver cells.
                                                                                                                                                                                                                                                                                                                           Claim 9; Page 14; 37pp; English

The properties of the construct are essentially specific for hepatocytes and well-differentiated hepatoma lines and insulin expression in these cells may have effects additional to those provided by secreted insulin, e.g. inhibition of cellular protein degradation, and inhibition, or stimulation of other intracellular hormone receptors. This sequence represents a rat insulin regulator construct of the invention
                                                                               New insulin regulator cassette, useful e.g. for treating diabetes provides specific, glucose-inducible transgenic expression of instituer cells.
                                                                                                                                                                                          WPI; 2002-674190/72
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    08-AUG-2002
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         17-APR-2003

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     CC The invention relates to an insulin regulator construct comprising a CC glucose response element (GJRE) of a liver pyruvate kinase (LPK) gene CC promoter and an insulin-sensitive element (ISE) of an insulin-like growth CC factor binding protein-1 (IGFBP-1) basal promoter. The construct is used to treat or prevent diabetic complications, to regulate insulin CC production, to modulate hyperglycaemia (without severe hypoglycaemia), to increase fat catabolism and to retard protein catabolism. The construct CC provides stimulation of insulin expression by glucose (but not other CC carbohydrates) and glucocorticois and inhibition by glucagon so that a CC combination of these effects can maintain nearly euglycaemic conditions CC indiabetics during short-term fasting, large carbohydrate loads or when CC fed ad libitum and prevent pathological kerogenesis and ketoacidosis, CC thus inhibiting the long-term complications of diabetes. The properties of the construct are essentially specific for hepatocytes and well-CC differentiated hepatoma lines and insulin expression in these cells may care effects additional to those provided by secreted insulin, e.g. cinibition of cellular protein degradation, and inhibition, or represents a rat insulin-sensitive element of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  CC The invention relates to an insulin regulator construct comprising a CC glucose response element (GIRE) of a liver pyruvate kinase (LPK) gene CC promoter and an insulin-sensitive element (ISE) of an insulin-like growth CC factor binding protein-1 (IGFBP-1) basal promoter. The construct is used CC treat or prevent diabetic complications, to regulate insulin CC production, to modulate hyperglycaemia (without severe hypoglycaemia), to CC increase fat catabolism and to retard protein catabolism. The construct creation of insulin expression by glucose (but not other CC carbohydrates) and glucocorticoids and inhibition by glucagon so that a CC combination of these effects can maintain nearly euglycaemic conditions CC in diabetics during short-term fasting, large carbohydrate loads or when CC fed ad libitum and prevent pathological ketogenesis and ketoacidosis, thus inhibiting the long-term complications of diabetes. The properties CC of the construct are essentially specific for hepatocytes and well-CC differentiated hepatoma lines and insulin expression in these cells may effects additional to those provided by secreted insulin, e.g. CC inhibition of cellular protein degradation, and inhibition, or CC stimulation of other intracellular hormone receptors. This sequence CC represents a rat insulin regulator construct of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to an insulin regulator construct comprising a CC glucose response element (GIRE) of a liver pyruvate kinase (LPK) gene CC promoter and an insulin-sensitive element (ISE) of an insulin-like growth CC factor binding protein-l (IGFBP-1) basal promoter. The construct is used to treat or prevent diabetic complications, to regulate insulin CC production, to modulate hyperglycaemia (without severe hypoglycaemia), to cincrease fat catabolism and to retard protein catabolism. The construct CC provides stimulation of insulin expression by glucose (but not other CC combination of these effects can maintain nearly euglycaemic conditions combination of these effects can maintain nearly euglycaemic conditions combination of these effects can maintain nearly euglycaemic conditions cf ed ad libitum and prevent pathogogications of diabetes. The properties of the construct are essentially specific for hepatocytes and well-cations inhibiting the long-term complications of diabetes. The properties of the construct are essentially specific for hepatocytes and well-cations of cellular protein degradation, and inhibition, or stimulation of other intracellular hormone receptors. This sequence represents a rat insulin regulator construct of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Matches 103;

                                                                                                                                                                                    CC of a compound. The method comprises preparing a gene expression profile CC of a tissue or cell sample exposed to the compound, and comparing the CC gene expression profile to a database comprising SEQ ID 1-4925, where CC differential expression of the gene indicates at least one toxic effect. The method is useful for predicting at least one toxic effect of a compound, predicting hepatotoxicity or the progression of a toxic effect of a compound, identifying an agent that modulates the onset or CC progression of a toxic response, predicting the cellular pathways that a CC compound modulates in a cell, and identifying an agent that modulates at CC compound modulates in a cell, and identifying an agent toxin-induced CC present invention using a database of genes having liver toxin-induced CC differential expression, are useful in identifying toxicity markers in CC liver tissues or cells for drug screening and toxicity assays. Note: The sequence data for this patent did not form part of the printed consecution, but was obtained in electronic format directly from WIPO

Claim 44; SEQ ID NO 3252; 874pp; English

comprising data or information on the Tox mean and non-Tox mean value. The method is useful for predicting or identifying at least one toxic effect, particularly hepatotoxicity, of a test or unknown compound. The genes listed in the specification are useful as diagnostic or toxicity markers for the prediction or identification of the physiological state of tissue or cell sample that has been exposed to a compound, or to identify or predict the toxic effects of a compound or an agent. These may also be used as markers for monitoring toxicity progression or for drug screening. The present sequence represents a primary rat hepatocyt toxicity modelling related gene sequence from the present invention. The present invention describes a method for determining whether a compound induces a toxic effect on a tissue or cell. The method comprises preparing a gene expression profile of a tissue or cell sample exposed to the compound, and comparing the gene expression profile to a database rat hepatocyte state The

WPI; 2003-148464/14.

Predicting at least one toxic effect of a compound, useful f modeling, comprises preparing a gene expression profile of a cell sample exposed to the compound, and comparing the gene profile to a database. for toxicity
a tissue or
e expression

Example 4; Page; 446pp; English.

The invention relates to a novel method of predicting at least one toxic effect of a compound. The method comprises a gene expression profile of a tissue or cell sample exposed to the compound, and comparing the gene expression profile to a database comprising at least part of the data or information given in the specification. The methods are useful for predicting at least one toxic effect of a compound, predicting the progression of a toxic effect of a compound, predicting the renal toxicity of a compound, or identifying toxicity markers in tissues

The invention relates to a method of predicting (the progression of) a toxic effect of a compound by preparing a gene expression profile of a kidney tissue or cell sample exposed to the compound and comparing the gene expression profile to a database, or detecting the level of gene(s) expression in a tissue or cell sample exposed to the compound, where differential gene expression compared to a control indicates a toxic effect (toxicity progression). The method is useful for predicting (the progression of) at least one toxic effect of a compound. The genes are useful as toxicity markers in drug screening and toxicity assays. The
                                                                                                                                                                                                             Claim 11;
                                                                                                                                                                                                                                                                  Predicting (the progression of) a toxic effect of a compound, for monitoring the progression of renal disease states, comprises preparing gene expression profile of a kidney tissue or cell sample exposed to the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             cells exposed to known renal toxin. The genes are useful as toxicity markers in drug screening and toxicity assays, in monitoring disease or physiological states, or disease progression. This polynucleotide represents a rat DNA sequence relating to the toxic effect database described in the specification. NOTE: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the World Intellectual Property

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                methods are useful for predicting the likelihood that a compound or test agent will induce various specific kidney pathologies, such as nephritis, kidney necrosis, glomerular and tubular injury, or focal segmental glomerulosclerosis. The methods are useful for determining the similarity of a toxic response to one or more individual compounds and for predicting or elucidating the potential cellular pathways influenced, induced or modulated by the compound or test agent. The kit is useful for predicting or modelling the toxic response of a test compound, for monitoring the progression of renal disease states, for identifying genes that show promise as new drug targets and for screening known and newly designed drugs. This sequence corresponds to a gene marker used in the method of the invention. (Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic forms part of the printed specification, but was obtained in electronic

```

The present invention describes a method of screening a test agent for hepatotoxicity. The method comprises: (a) providing a test cell population comprising a cell capable of expressing one or more nucleic acid sequences selected from the group consisting of RISKWARKER 1-8 and the test cell population with a test

                     The invention relates to a novel method for diagnosing and detecting the progression of liver cancer, hepatocellular carcinoma or metastatic liver tumour in a patient, and differentiating metastatic liver cancer from hepatocellular carcinoma in a patient, involving detecting the level of expression of two or more genes represented in ABN93503-ABN97455 in a tissue sample. The method of the invention has hepatotropic, and cytostatic activity. The method is useful for diagnosing and detecting the progression of liver cancer, hepatocellular carcinoma and metastatic liver carcinoma in a patient. The method is useful for identifying expression profiles which serve as useful diagnostic markers as well as

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             agent; (c) measuring expression of one or more of the nucleic acid sequences in the test cell population; (d) comparing the expression of the nucleic acid sequence in the test cell population to the expression of the nucleic acid sequence in an reference cell population comprising at least one cell whose exposure status to a hepatotoxic agent in known; and (e) identifying a difference in expression levels of the RISKMARKER or INJURYMARKER sequences, if present, in the test cell population and reference cell population. The method is useful for identifying a hepatotoxic agent. The present sequence is given in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                    Claim 1; SEQ ID NO 2394; 298pp; English.

The method involves detecting in a biological sample obtained from the patient aberrant expression of a gene encoding an insulin-like growth factor binding protein (IGPBP). The method is useful for detecting the presence or diagnosing the risk of a liver cancer or for screening agents in a patient. The agent is useful for the manufacture of a medicament for treating and/or preventing liver cancer. The present sequence represents a human IGPBP-1 polypeptide encoding genomic DNA (GenBank Accession No. M74587)
                                                                                                                                                                                                                                                                                                                                                     Sequence 6128 BP; 1504 A; 1497 C; 1504 G; 1623 T; 0 U; 0 Other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Detecting the presence or diagnosing the risk of a liver cancer in patient comprises detecting aberrant expression of a gene encoding insulin-like growth factor binding protein.
